

Color Management for Wedding & Portrait Photographers

Spyder2PRO™

The Professional's Choice for Monitor Calibration

Accurate, Reliable, & Consistent Color

The cornerstone of any digital darkroom. Unlimited choices for monitor gamma and temperature, custom response curve targeting and automated black and white luminance adjustments gives you absolute control over your color.

Define Custom Whitepoints

Achieve the exact white desired for wedding gowns and veils.

Multiple Monitor Matching to Consistent Black and White Luminance Settings

Achieve the most precise targeting and consistent calibration results. Gives you consistent display of tuxes and gowns.

Ambient PreciseLight™ Feature

Adjust profile settings to reflect different types of studio lighting. View your photos accurately on the monitor, for a better representation of what prints will look like.

Projector Profiling Function

Allows wedding and portrait photographers to use a digital projector as an effective sales tool for large photo prints.

PrintFIXPRO™ 2.0

Create Gallery Quality Prints in Color or Black & White Without Wasting Paper & Ink

Fast, Accurate Custom Profiling

Create custom profiles for any ink and any paper in minutes.

Softproofing Feature

See the effects of your profile and settings BEFORE you make a test print. Saves time paper and ink.

Curves Import Function from LightRoom / Photoshop

Apply color and B&W tinting curves to your image editor - affecting the profile and not individual images.

Extended Gray Target Enhances Quality of Tinted and B&W Prints

Advanced control for neutral and near neutral tones in color images, for dead neutral B&W prints, and easily controlled sepias and cross-tints.

Print B&W and Color Images on the Same Page

Control color and neutrality of multiple images on one page or in the same composition. Great for wedding & portrait albums that have layouts containing both color and B&W elements.

COLORVISION
datacolor

Please come and visit ColorVision|Datacolor at Booth# 309.
